Height: 20 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 4b

Other Names: Japanese Plum

Description:

This variety bears large bright red fruit with a gold wash, sweet and juicy amber flesh; an upright spreading tree that is quite ornamental; adaptable but performs best in full sun, well-drained soil; a suitable pollenizer will increase productivity

Edible Qualities

Beauty Plum is a small tree that is commonly grown for its edible qualities. It produces large tomato-orange round fruit (technically 'drupes') with a gold blush and yellow flesh which are usually ready for picking from early to mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste and a juicy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Preserves

Features & Attributes

Beauty Plum is smothered in stunning clusters of fragrant white flowers along the branches in early spring before the leaves. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy tomato-orange drupes with a gold blush, which are carried in abundance from early to mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Beauty Plum is sutiable for the following landscape applications;

- Accent
- Orchard/Edible Landscaping

Planting & Growing

Beauty Plum will grow to be about 20 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
