HANA GARDENS

Pinebark Japanese Maple

Acer palmatum 'Nishiki Gawa'

Height: 15 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 5b

Other Names: Pine Bark Japanese Maple

Description:

This fine selection features interesting deeply fissured bark almost like a pine tree, which is even more pronounced with age; bright green leaves during summer turn red and gold in fall; a stunning ornamental feature tree

Ornamental Features

Pinebark Japanese Maple is primarily valued in the landscape for its ornamental globe-shaped form. It has attractive light green deciduous foliage. The small lobed palmate leaves are highly ornamental and turn outstanding shades of gold and red in the fall. The warty brown bark is extremely showy and adds significant winter interest.

Landscape Attributes

Pinebark Japanese Maple is a dense deciduous tree with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Planting & Growing

Pinebark Japanese Maple will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Pinebark Japanese Maple is a fine choice for the yard, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
